(54) Title: A METHOD FOR HANDLING POSITION DATA IN A MOBILE EQUIPMENT, AND A MOBILE EQUIPMENT HAVING IMPROVED POSITION DATA HANDLING CAPABILITIES
(57) Abstract: A method for generating position information in a mobile equipment provided with at least two position determination devices, comprises the following steps: - allocating to each position determination devime at least one stored paremeter value, - determining a context information, - depending on the context information, choosing a corresponding position determination device selection process based on the value of said at least one parameter for each position determination device, and - slecting a position determination device according to the chosen selection process, and - activating said selected position determination device. Application to location based services with a better handling of available positioning resources.
